REST API Automation using python unittest

[Python unittest](https://docs.python.org/3/library/unittest.html)

The end point used here as an example is: https://reqres.in/

config

This is the placeholder for all config related changes

log

Here you can find the log on each test you run

testcases

This is where you keep your test cases. Make sure files starts with 'test'

testlib

Library folder which will have a couple of common functions. For example, 'main_test_case' will have setup , request functions etc.

utils

Here you can find utility functions like loggers, suitemaker etc.

execution

`python TestSuite.py`
